## **Agama announces automated solution for verification of on-demand video content**

Agama Technologies AB today announces Agama Verifier, an automated solution for testing and validating on-demand video content.

The Agama Verifier is a software-based solution for automated off-line testing and validating video content. It integrates in an operator's workflow for handling VOD assets and supports fully automated verification, replacing time consuming manual testing. Agama Verifier can test assets for standards conformance, as well as testing it for user-definable criterias such as languages for audio and subtitles, bitrates, video formats and other parameters. This enables an operator or broadcaster to find problematic content before it is ingested and can cause customer complaints.

"Agama Verifier enables operators to cost effectively handle the large volumes of on-demand content needed for attractive VOD services. Manually inspecting content for errors or out-of-spec parameters is costly and error prone" says Managing Director Mikael Dahlgren. "Agama Verifier gives operators an effective tool to ensure quality in their on-demand content right at the source".

Agama Verifier supports MPEG-2 and MPEG-4 AVC video in standard and high definition, MPEG Audio (Layer 1,2,3), AC-3 audio, as well as DVB subtitles. It runs on industry standard PC servers and supports leading Linux distributions.

### **About Agama**

Agama Technologies AB is devoted to be the leading provider of products and services enabling high quality digital media distribution of over IP networks.

The company is privately owned by the founders and is based in Linköping, Sweden.
